

1. Open **File Explorer**. You can click the folder icon on the taskbar. Then you will see something like this below

2. In the left-hand menu, find and click **This PC**.

3. Under **This PC**, find the drive where you want to store your class files.

I recommend using the **H: drive** if it is available on your lab computer. The H: drive may be connected to your account, so the files you save there should still be available when you log in again on another school computer.

If you are doing this on your **own laptop**, you can use the **C: drive** or another folder where you normally keep your files, such as **Documents**. Just make sure you remember where you saved the folder.

I'm using the **C: drive** here just because I don't have an **H: drive** on my laptop, and by default, I usually store my files there.

4. Double-click the drive you want to use, such as **H:**.
5. Once you are inside the drive, right-click on an empty area.
6. Select **New** → **Folder**.
7. Name the new folder:
CS101-2026
8. Press Enter

You should now have a folder named CS101-2026 where you can save your files for this course.

Now you need to go to our course website to download a lab.

See next page 

1. Download a **ZIP file** from **Labs** on our website.
2. Once the download is complete, open **File Explorer** and go to your **Downloads** folder.

3. Find the ZIP file you just downloaded and **double-click** it to open it.
4. Inside the ZIP file, you should see a folder with the **same or a similar name as the ZIP file**.

5. Select that folder, then **right-click** → **Copy**. You can also press **Ctrl + C**.

6. Go to the **CS101-2026** folder that we created earlier (it should be empty now).

7. Inside the **CS101-2026** folder, **right-click** → **Paste**. You can also press **Ctrl + V**.

8. The downloaded folder should now be inside your **CS101-2026** folder.

9. If you open the lab, for example, this **CS101_Lab00**, it will look like this.

You can find the path to this lab folder at

The path to this folder will be **C: → CS101-2026 → CS101_Lab00**
or **H: → CS101-2026 → CS101_Lab00** if you create the CS101-2026 under H drive

(But it really depends on where you created your course folder!!!!)

Now you need to open the .cpp file using Notepad or
Notepad++

See next page

1. Find the **.cpp** file that you want to open.
2. **Right-click** the **.cpp** file.
3. Select **Open with**.
4. From the list of applications, select **Notepad (or Notepad++)**.
5. If you do not see Notepad, click **Choose another app**, then find and select **Notepad (or Notepad++)**.

After you finish your code in Notepad (or ++), go to the next page.

1. Open **Cygwin Terminal** on your computer. You can search for **Cygwin** from the Windows Start menu.
2. First, go to the drive where you created your **CS101-2026** folder. For example, if you used the **C: drive**, type:

```
cd C:
```

3. Then press **Enter**.

cd stands for **change directory**. In the Terminal or Command Prompt, a **directory** is basically a folder.

We use **cd** when we want to move from one folder to another.

```
/cygdrive/c
dchen3@KEC110-LAP-Y26 ~
$ cd C:
dchen3@KEC110-LAP-Y26 /cygdrive/c
$ |
```

See the next page

1. Next, type:

ls (This is a l(ist) not number 1)

and press **Enter**.

2. **ls** stands for **list**. It shows you the files and folders inside your current location.

3. Look through the list and check whether you can see the course folder that we created earlier:

CS101-2026

```

dchen3@KEC110-LAP-Y26 ~
$ cd C:

dchen3@KEC110-LAP-Y26 /cygdrive/c
$ ls
'$Recycle.Bin'          OneDriveTemp          'SOLIDWORKS Data'    hiberfil.sys
'$WINRE_BACKUP_PARTITION.MARKER' PerfLogs              'System Volume Information' inetpub
CS101-2026              'Program Files'       Temp                  notify_debug.txt
Config.Msi              'Program Files (x86)' Users                  pagefile.sys
'Documents and Settings' ProgramData            Windows               swapfile.sys
DumpStack.log.tmp      Recovery              cygwin64

```

4. If you see **CS101-2026**, you know that you are in the correct location and that your course folder is there.

5. You can then go inside the course folder by typing:

cd CS101-2026

and pressing **Enter**.

Tip: You can use **ls** whenever you are unsure what files or folders are available in your current location. It is a useful way to check where you are before using **cd** to move into another folder.

```
/cygdrive/c/CS101-2026
dchen3@KEC110-LAP-Y26 ~
$ cd C:

dchen3@KEC110-LAP-Y26 /cygdrive/c
$ ls
'$Recycle.Bin'          OneDriveTemp          'SOLIDWORKS Data'      hiberfil.sys
'$WINRE_BACKUP_PARTITION.MARKER' PerfLogs              'System Volume Information' inetpub
CS101-2026              'Program Files'       Temp                   notify_debug.txt
Config.Msi              'Program Files (x86)' Users                  pagefile.sys
'Documents and Settings' ProgramData            Windows                swapfile.sys
DumpStack.log.tmp       Recovery              cygwin64

dchen3@KEC110-LAP-Y26 /cygdrive/c
$ cd CS101-2026/

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$
```

After you are inside the **CS101-2026** folder, type:

ls

Then press **Enter**.

This will show you all the files and folders inside **CS101-2026**. Look for the **lab** folder (i.e. **CS101_Lab00**) that you copied earlier.

```
/cygdrive/c/CS101-2026
dchen3@KEC110-LAP-Y26 ~
$ cd C:

dchen3@KEC110-LAP-Y26 /cygdrive/c
$ ls
'$Recycle.Bin'          OneDriveTemp          'SOLIDWORKS Data'      hiberfil.sys
'$WINRE_BACKUP_PARTITION.MARKER' PerfLogs              'System Volume Information' inetpub
CS101-2026              'Program Files'       Temp                   notify_debug.txt
Config.Msi              'Program Files (x86)' Users                  pagefile.sys
'Documents and Settings' ProgramData            Windows                swapfile.sys
DumpStack.log.tmp       Recovery              cygwin64

dchen3@KEC110-LAP-Y26 /cygdrive/c
$ cd CS101-2026/

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ ls
CS101_Lab00

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$
```

1. Once you find your lab folder, use `cd` followed by the folder name to go inside it. For example:

```
cd CS101_Lab00
```

Then press **Enter**.

2. Once you are inside the lab folder, type:

```
ls
```

Then press **Enter**.

3. You should now see **three files** listed in the terminal.

If you can see all three files, you are in the correct lab folder and are ready for the next step.

```
/cygdrive/c/CS101-2026/CS101_Lab00
dchen3@KEC110-LAP-Y26 ~
$ cd C:
dchen3@KEC110-LAP-Y26 /cygdrive/c
$ ls
'SRecycle.Bin'          OneDriveTemp          'SOLIDWORKS Data'    hiberfil.sys
'SWINRE_BACKUP_PARTITION.MARKER' PerfLogs              'System Volume Information' inetpub
CS101-2026              'Program Files'       Temp                  notify_debug.txt
Config.Msi              'Program Files (x86)' Users                  pagefile.sys
'Documents and Settings' ProgramData            Windows               swapfile.sys
DumpStack.log.tmp       Recovery              cygwin64
dchen3@KEC110-LAP-Y26 /cygdrive/c
$ cd CS101-2026/
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ ls
CS101_Lab00
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ cd CS101_Lab00/
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ ls
Makefile  hello.cpp  submitToMarmoset.pl
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$
```

If you finish writing and saving your code in the **.cpp file** and your Cygwin terminal inside your lab folder from the previous step, go to the next steps.

1. Compile Your Program with **make**

Type:

make

Then press **Enter**.

The **make** command compiles your C++ program. If you only see the **two expected lines shown in the example** and there are no error messages, that means your program compiled successfully and you are all set.

```
/cygdrive/c/CS101-2026/CS101_Lab00
dchen3@KEC110-LAP-Y26 ~
$ cd C:
dchen3@KEC110-LAP-Y26 /cygdrive/c
$ ls
'$Recycle.Bin'          OneDriveTemp          'SOLIDWORKS Data'      hiberfil.sys
'$WINRE_BACKUP_PARTITION.MARKER' PerfLogs              'System Volume Information' inetpub
CS101-2026              'Program Files'       Temp                   notify_debug.txt
Config.Msi              'Program Files (x86)' Users                  pagefile.sys
'Documents and Settings' ProgramData            Windows                swapfile.sys
DumpStack.log.tmp       Recovery              cygwin64
dchen3@KEC110-LAP-Y26 /cygdrive/c
$ cd CS101-2026/
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ ls
CS101_Lab00
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ cd CS101_Lab00/
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ ls
Makefile  hello.cpp  submitToMarmoset.pl
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ make
unset GCC_EXEC_PREFIX && g++ -g -Wall -c -o hello.o hello.cpp
unset GCC_EXEC_PREFIX && g++ -o hello.exe hello.o
dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ |
```

2. Run Your Program

After your program compiles successfully, you can run it using:

./xx.exe

Replace **xx.exe** with the name of your program.

For example, if your program is called **hello.exe**, type:

./hello.exe

Then press **Enter**.

Check the output and make sure your program works as expected.

3. Submit Your Lab

If everything looks good, type:

```
make submit
```

Then press **Enter**.

You should see several messages in the terminal asking you to log in. Enter your **Marmoset username** when prompted, press **Enter**, and then enter your **Marmoset password**.

Important: When you type your password, you may not see anything appear on the screen—the cursor may not move and no characters will be displayed. **This is normal.** Your password is still being entered.

If you think you mistyped your password, press **Enter** and try entering it again when prompted.

A screenshot of a terminal window titled '/cygdrive/c/CS101-2026/CS101_Lab00'. The terminal shows a user named 'dchen3@KEC110-LAP-Y26' navigating through directories: /cygdrive/c, /cygdrive/c/CS101-2026, and /cygdrive/c/CS101-2026/CS101_Lab00. In the Lab00 directory, there are files 'hello.cpp', 'submitToMarmoset.pl', and a 'Makefile'. The user runs 'make', which compiles 'hello.cpp' into 'hello.o' and 'hello.exe'. Then, the user runs 'make submit', which creates a 'submit.properties' file, collects file names, and creates a 'solution.zip' file containing 'hello.cpp' (5% deflated), 'Makefile' (52% deflated), and 'submitToMarmoset.pl' (60% deflated). The process ends with the command 'perl submitToMarmoset.pl solution.zip submit.properties' and a prompt 'Enter your username: |'.

```
dchen3@KEC110-LAP-Y26 /cygdrive/c
$ ls
'$Recycle.Bin'          OneDriveTemp          'SOLIDWORKS Data'    hiberfil.sys
'$WINRE_BACKUP_PARTITION.MARKER' PerLogs               'System Volume Information' inatpub
CS101-2026              'Program Files'      Temp                 notify_debug.txt
Config.Msi              'Program Files (x86)' Users                 pagefile.sys
'Documents and Settings' ProgramData           Windows              swapfile.sys
DumpStack.log.tmp      Recovery              cygwin64

dchen3@KEC110-LAP-Y26 /cygdrive/c
$ cd CS101-2026/

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ ls
CS101_Lab00

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026
$ cd CS101_Lab00/

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ ls
Makefile  hello.cpp  submitToMarmoset.pl

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ make
unset GCC_EXEC_PREFIX && g++ -g -Wall -c -o hello.o hello.cpp
unset GCC_EXEC_PREFIX && g++ -o hello.exe hello.o

dchen3@KEC110-LAP-Y26 /cygdrive/c/CS101-2026/CS101_Lab00
$ make submit
Creating submit.properties file
Collecting the names of files to be submitted
Creating a solution zip file
  adding: hello.cpp (deflated 5%)
  adding: Makefile (deflated 52%)
  adding: submitToMarmoset.pl (deflated 60%)
perl submitToMarmoset.pl solution.zip submit.properties
Enter your username: |
```

4. Check That Your Submission Was Successful

After submitting, read the messages in the terminal.

If you see a message saying something like **submission successful**, you are all set! Your lab has been submitted successfully.
